

Conventional rural references inflate upper-tail satellite surface urban heat-island rankings

Of the conventional-reference top 100:

97 / 100 drop out of the top 100 after correction

98 % are high-terrain cities (vs 20.4% baseline)

rho = 0.68 conventional vs elevation-matched ranking

Dominated by the Himalaya-Tibet, Andes, Iranian and N. American cordillera.
A within-city correction and a global per-city dataset are released.
